

DEMONSTRATION MARONIHOF, BREGENZ, AT

The Maronihof complex is a beacon for an energy efficient and responsible organisation of a smaller settlement's mobility needs.

Sustainability is of major importance for the inhabitants of the Maronihof complex. RHOMBERG and the inhabitants themselves developed suitable and tailor made solutions for their settlement. CarSharing e.g. is realised by an individual solution by car owners sharing their cars with the other inhabitants. The system easily relies on a simple contract ruling costs, use and insurance of the system. Additionally to CarSharing, the inhabitants share bicycles and a pedelec. The pedelec has been used a great deal, so a second one has already been bought. To ease bicycle use in general, the complex includes a bicycle service station with tools for repair and maintenance as well as an air compressor for inflating the tires. Have a look [here](#) to read about all activities!

DEMONSTRATION BGW, BIELEFELD, DE

Increased mobility activities and services for tenants: ILS, BGW, moBiel and Cambio collaborated for a better mobility offer for BGW's customers.

ILS initiated a cooperation between Bielefeld's biggest property management company, the local public transport provider and the local Car Sharing provider. They aimed at raising the level of mobility services and with that, the satisfaction and length of stay of BGW's tenants. The offers, which the cooperation developed, are tickets for tenants, special conditions for Cambio Car Sharing use as well as mobility information. For BGW's customer advisors, the cooperation developed a training set to educate them to give information on mobility offers of their products.

The work was intensified in BGW's housing complex in the city district of Ummeln by establishing a new Car Sharing point and improving the accessibility to public transport. Please read more about the ILS demonstration [here](#).

DEMONSTRATION PEGLI, GENOVA, IT

Starting by changing the cause: AMI used efficient car usage and information to increase sustainable modal choices.

Genova's city district Pegli, 15 km from the city centre, is sending more than 2.000 cars to the city centre each morning, which heavily contributes to peak congestions and the overload of the city centre's arterials. AMI established a cooperation with the municipality, the city district council, public transportation, Genova Car Sharing and many other entities to develop, implement and promote mobility services that change mobility choices in Pegli in favour of energy efficient transportation. The three main actions have been the installation of Car Sharing in Pegli by two parking spaces, the creation of an online Car Pooling system for Pegli as well as a Pegli focused Info Mobility Website bundling all relevant information on mobility in a one-stop-shop. Please [click here](#) to read about the three demonstrations in Genova!

ADD HOME FINAL BROCHURE

You are interested in learning more about the ADD HOME demonstrations? We are gladly sending you a copy of our final brochure dealing about them! Just enter our website [here](#) and send a mail naming your address and we will send you a copy! Choose between Bulgarian, English, German, Italian and Slovenian!
